

spray systems gmbh

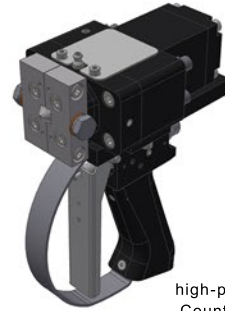

innovative maschinentechnologie

Dispensing units

- ▶ with the possibility of material circulation
- ▶ for high-pressure spraying applications using the counterflow injection method
- ▶ for low-pressure spraying applications with static mixer and nozzle attachment; with or without support tube
- ▶ for low-pressure molding applications with static mixer; with or without support tube
- ▶ Special solutions possible

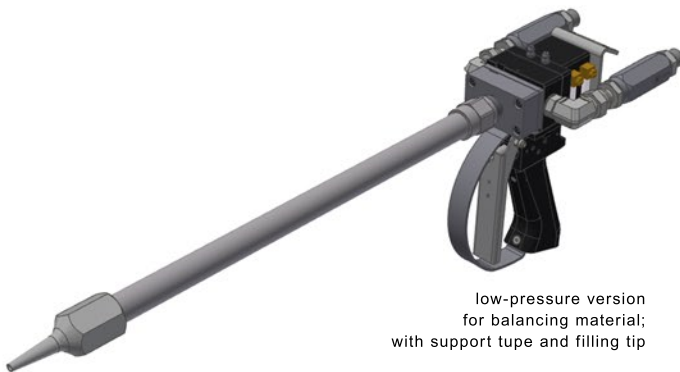

*depending on material, temperature and machine configuration

high-pressure version
Counterflow injection

high-pressure version
Counterflow injection
with atomiser attachment

low-pressure version
for balancing material;
with support tube and filling tip

low-pressure version
with 2:1 mixer holder

Special solution (low-pressure);
Purging with A component
